

How to Install an Update?

To install this update, replace your earlier version of GeoCoPS(3.0).exe with the one included in this download. If your Help file is outdated (i.e., it is not *.chm but *.hlp) you need to replace the existing file which is residing in the same directory. You can use Windows Explorer to copy the two files in this zipped download. If you do not know where is the folder holding the current GeoCoPS(3.0), click on Start, then on Search and type in GeoCoPS(3.0).exe. This should identify the folder where GeoCoPS is installed. The default directory of GeoCoPS installation is:

C:\Programs File\ADAMA\GeoCoPS(3.0)\

GeoCoPS(3.0) Update 1.2 (2013.04.11):

Capturing of the graphic results as a bitmap file was adjusted to improve the captured area.

GeoCoPS(3.0) Update 1.1 (2012.08.24):

If the user selects only one layer of infill material to be pumped in, the need to enter the height of the lower layer was eliminated so as to avoid confusion.

GeoCoPS(3.0) Update 1.0 (2007.08.28):

Windows no longer use Help files as *.hlp; the Help was converted to *.chm. The program was adjusted accordingly. Please replace both the *.exe and *.hlp with those in the zipped file.

Thank you for using GeoCoPS.
